3. Reference

3.1. Overview

There are applications that require access to data only available to the Indirect Provider through Partner Center. Since Partner Center does not have an ability to restrict access to data by tenant id or subscription id, TD SYNEX created a proxy to allow customers to access data related to their tenants.

The goal of the proxy is to limit the changes required to applications created by ISVs and customers. The only change that should be required is to point to a TD SYNEX endpoint and use a TD SYNEX supplied credential.

3.2. Example Partner Center Request direct to Microsoft

The following request would get information about a specific customer that is sent to Microsoft

```
GET https://api.partnercenter.microsoft.com/v1/customers/55556666-aaaa-bbbb-cccc-777888899990
```

The access token passed with the request would come from the Microsoft authentication endpoint, such as:

```
POST https://login.microsoftonline.com/common/oauth2/v2.0/token
```

3.3. Example Partner Center Request using PAC Proxy

The following request would get the same information about a specific customer

```
GET https://apipartnercenter.msapi.tdsynnex.com/v1/customers/55556666-aaaa-bbbb-cccc-777888899990
```

The access token passed with the request would come from the TD SYNEX authentication endpoint, such as:

```
POST https://login.msapi.tdsynnex.com/common/oauth2/v2.0/token
```

Notice that the only change to the use of the API is the host to which the request is sent.

3.4. Response

When the request is received by the TD SYNnex endpoint, the TD SYNnex solution will perform some checks to confirm that the request is allowed.

If allowed, the TD SYNnex solution will submit the request to Microsoft by replacing the host in the request and including a Microsoft access token. The body submitted with the request will be forwarded too.

If not allowed, the TD SYNnex solution will return our own error message identifying the issue.

The response returned is unchanged by TD SYNnex. Whatever is sent back by Microsoft, including error messages, is returned to the caller.
